ДИСКИ, ВТУЛКИ и ВКЛАДЫШИ ДЛЯ НАСОСОВ

High chrome slurry pump throat bush

Throat bush is one of wet parts of slurry pumps. It links plate liner and forms a Pump chamber to work with impeller.

We proudly manufacture quality high chrome slurry pump throat bush and other replacement parts for some famous pump manufactures, which are 100% REVERSE INTERCHANGEABLE, no need to change your stock.

1. Hi Chrome Cr27 is a wear resistant white iron that offers excellent performance under erosive conditions. The alloy can be effectively used in a wide range of slurry types. The high wear resistance of alloy Cr27 is provided by the presence of hard carbides within its micro-structure. Alloy Cr27 is particularly suited to applications where mild corrosion resistance, as well as erosion resistance is required.
2. Cr15Mo3 Marten-sic white iron with moderate erosion resistance.
3. A49 is suitable for low PH corrosion duties, where erosive wear is also a problem. The alloy is particularly suitable for Flue Gas Desulphu-rization(FGD) and other corrosive applications, where the pH is less than 4. The alloy can also be used in other mildly acidic environments. A49 has an erosion resistance similar to that of Ni-Hard 1.

Frame plate liner insert

Frame plate liner insert is also one of wet parts of slurry pumps, someone also call it as slurry pump back liner based on it position in slurry pump. It forms a pump chamber with throat bush and volute liner where the slurry would flow through them.

We proudly manufacture quality Frame Plate Liner Insert and other replacement parts for some famous pump manufactures, which are 100% REVERSE INTERCHANGEABLE, no need to change your stock.

Materials:

1. Hi Chrome Cr27 is a wear resistant white iron that offers excellent performance under erosive conditions. The alloy can be effectively used in a wide range of slurry types. The high wear resistance of alloy Cr27 is provided by the presence of hard carbides within its micro-structure. Alloy Cr27 is particularly suited to applications where mild corrosion resistance, as well as erosion resistance is required.
2. Cr15Mo3 Marten-sic white iron with moderate erosion resistance.
3. A49 is suitable for low PH corrosion duties, where erosive wear is also a problem. The alloy is particularly suitable for Flue Gas Desulphu-rization(FGD) and other corrosive applications, where the pH is less than 4. The alloy can also be used in other mildly acidic environments. A49 has an erosion resistance similar to that of Ni-Hard 1.

Rubber slurry pump throat bush

Rubber slurry pump throat bush is used to deal with the corrosive slurry with blunt particles. They are made of natural rubber, synthetic rubber, EPDM Rubber, Nitrile Rubber, Fluoroelastomer or any other as you required.

We proudly manufacture quality rubber slurry pump impellers and other replacement parts for some famous pump manufactures, which are 100% REVERSE INTERCHANGEABLE, no need to change your stock.

Partial list of throat bush available for the contemporary and legacy OEM styles

AH slurry pump impellers style

1.5 / 1 2 / 1.5 3 / 2 4 / 3

6 / 4 8 / 6 10 / 8 12 / 10

14 / 12 16 / 14 18 / 16 20 / 18

Slurry Pump Shaft Sleeve

Slurry Pump Shaft Sleeve is also a very important slurry pump part. The design and material of shaft sleeve is significant to its service life because it is also one of the wear parts.

Slurry Pump Volute Seal

There are two volute seals of a slurry pump, one is between the volute and throat bush (code as 124), the other is in the middle of frame plate liner insert and volute (code as 125)

Check the bellow picture to know more

Slurry Pump Intake Joint

Slurry pump intake joint is used to seal the pump and pipeline or valve connected to the pump suction end.

Check the bellow picture to know its position
